1. INTRODUCTION

1 Project Overview

The Economic Freedom Analysis project focuses on studying and evaluating the level of economic freedom in different countries using global economic indicators. Economic freedom refers to the ability of individuals and businesses to make decisions related to production, trade, investment, and consumption with minimal government interference. The project is based on the Index of Economic Freedom developed by The Heritage Foundation, which measures how supportive a country's policies and institutions are toward economic growth, entrepreneurship, and open markets.

In this project, economic data is analyzed and visualized using a data analytics and visualization tool such as Tableau. The analysis focuses on twelve indicators grouped into four key pillars: rule of law, government size, regulatory efficiency, and open markets. By creating visual dashboards, charts, and comparisons, the project helps identify patterns and trends in economic freedom across countries. The main objective is to transform complex economic data into meaningful visual insights that help understand the relationship between economic policies and a country's development and prosperity.

1.2 Purpose

The purpose of this project is to explore global economic conditions by examining how different countries perform in terms of economic freedom. The project aims to study multiple economic indicators and understand how government policies, legal systems, and market regulations influence business activities, investments, and economic stability. By analyzing these factors, the project provides insights into how economic environments vary across nations.

Another important purpose of this project is to use modern data visualization techniques to make large economic datasets easier to understand. By creating visual dashboards and analytical reports using Tableau and data from the Index of Economic Freedom published by The Heritage Foundation, the project helps highlight key patterns, comparisons, and relationships between economic freedom and a country's overall economic performance.

2. IDEATION PHASE

2.1 Problem Statement

Customer Problem Statement:

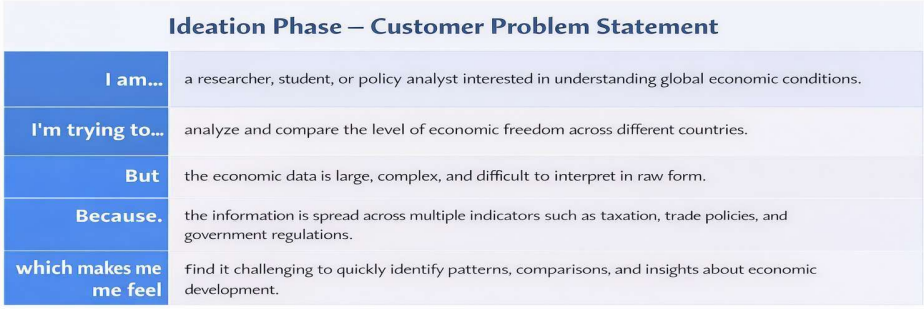
I am...
I am a student interested in understanding global economic conditions.

I'm trying to...
Analyze and compare the level of economic freedom across different countries.

But...
The economic data is large, complex, and difficult to interpret in raw form.

Because...
The information is spread across multiple indicators such as taxation, trade policies, and government regulations.

Which makes me feel...
Challenging to quickly identify patterns, comparisons, and insights about economic freedom and its impact on economic development.



Ideation Phase – Customer Problem Statement

I am...	a researcher, student, or policy analyst interested in understanding global economic conditions.
I'm trying to...	analyze and compare the level of economic freedom across different countries.
But	the economic data is large, complex, and difficult to interpret in raw form.
Because.	the information is spread across multiple indicators such as taxation, trade policies, and government regulations.
which makes me me feel	find it challenging to quickly identify patterns, comparisons, and insights about economic development.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a policy analyst / economist	analyse and compare economic freedom levels across different countries	economic data is spread across multiple indicators and datasets	there is no centralized interactive dashboard to visualize all economic indicators together	confused and inefficient in making policy analysis decisions
PS-1	a student / researcher	understand how factors like taxation, trade freedom, and government spending affect economic freedom	the datasets are large and difficult to interpret in raw format	traditional reports and tables do not clearly show relationships between indicators	overwhelmed and uncertain while performing analysis

2.2 Empathy Map Canvas

WHO are we empathizing with?

Primary Users:

- Economists
- Students studying economics
- Policy makers
- Business analysts
- Researchers Key Stakeholders:
- Government agencies
- Economic research institutions
- Universities
- International economic organizations What do they NEED TO DO?
- Collect and organize economic freedom data from multiple countries.
- Analyze key economic indicators such as taxation, trade freedom, and government spending.
- Compare economic freedom levels between different countries.
- Identify patterns and trends that affect economic growth and development.
- Convert complex datasets into visual dashboards using Tableau.
- Generate insights and reports to support research, policy analysis, and investment decisions.

What do they SEE?

- Large datasets containing economic indicators for different countries.
- Reports and rankings from sources like the Index of Economic Freedom by The Heritage Foundation.
- Charts, graphs, and dashboards created using Tableau.
- Comparisons of economic freedom scores between multiple countries.
- Trends and patterns showing how economic policies influence national economic performance.

What do they SAY?

- “We need clear insights to understand economic freedom across countries.”
- “The data should be easier to interpret and compare.”
- “Visual dashboards help us analyze economic indicators faster.”

- “Understanding economic policies is important for research and decision making.”
- “Comparative analysis helps identify economically strong countries.”

What do they DO?

- Collect and study economic data from different countries.
- Analyze indicators such as taxation, trade freedom, and government spending.
- Use visualization tools like Tableau to create dashboards.
- Compare economic freedom scores between countries.
- Prepare reports and presentations based on the analysis.

What do they HEAR?

- Discussions about global economic trends and policies.
- Research findings from economists and policy experts.
- News and reports about economic growth and development.
- Recommendations from organizations like The Heritage Foundation.
- Feedback from professors, analysts, and decision-makers about economic data insights.

Pains

- Difficulty in understanding large and complex economic datasets.
- Lack of clear visualization to compare economic freedom across countries.
- Economic indicators are spread across multiple sources and reports.
- Raw data tables make it hard to identify trends and patterns.
- Time-consuming process to analyze and interpret economic information.

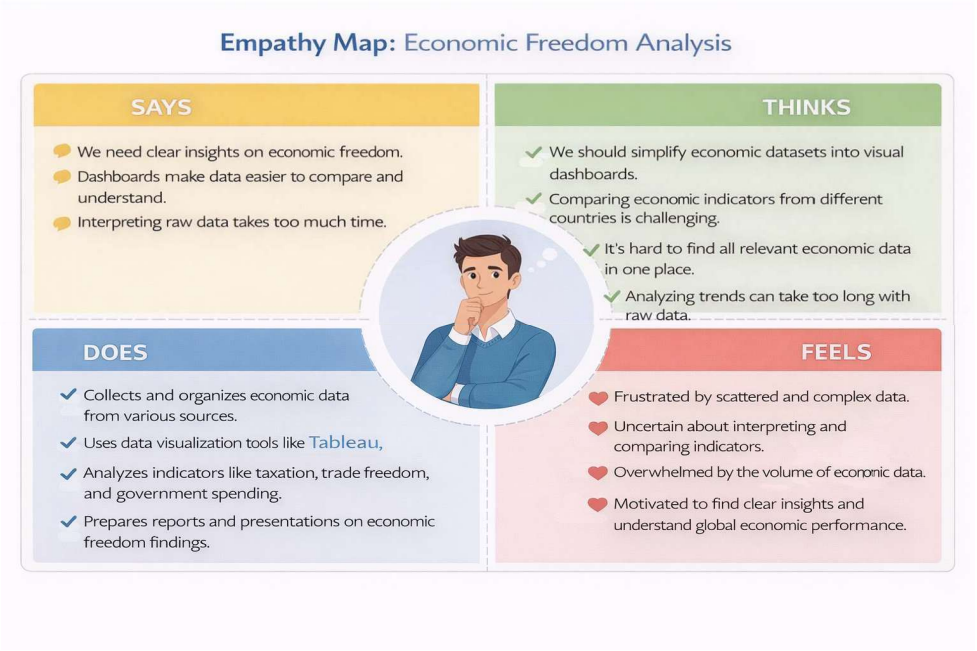
Gains

- Clear visualization of economic freedom indicators using Tableau dashboards.
- Easy comparison of economic performance between different countries.
- Better understanding of factors influencing economic growth and development.
- Quick identification of patterns and trends in economic freedom data.
- Improved decision-making for research, policy analysis, and economic studies using data from the Index of Economic Freedom by The Heritage Foundation.

Solution Statement

The solution is to develop an interactive data visualization system that analyzes and presents economic freedom indicators in a clear and structured way. By integrating global economic datasets into a single analytical platform, users can easily explore, compare, and interpret economic freedom levels across different countries.

Example:



2.3Brainstorming

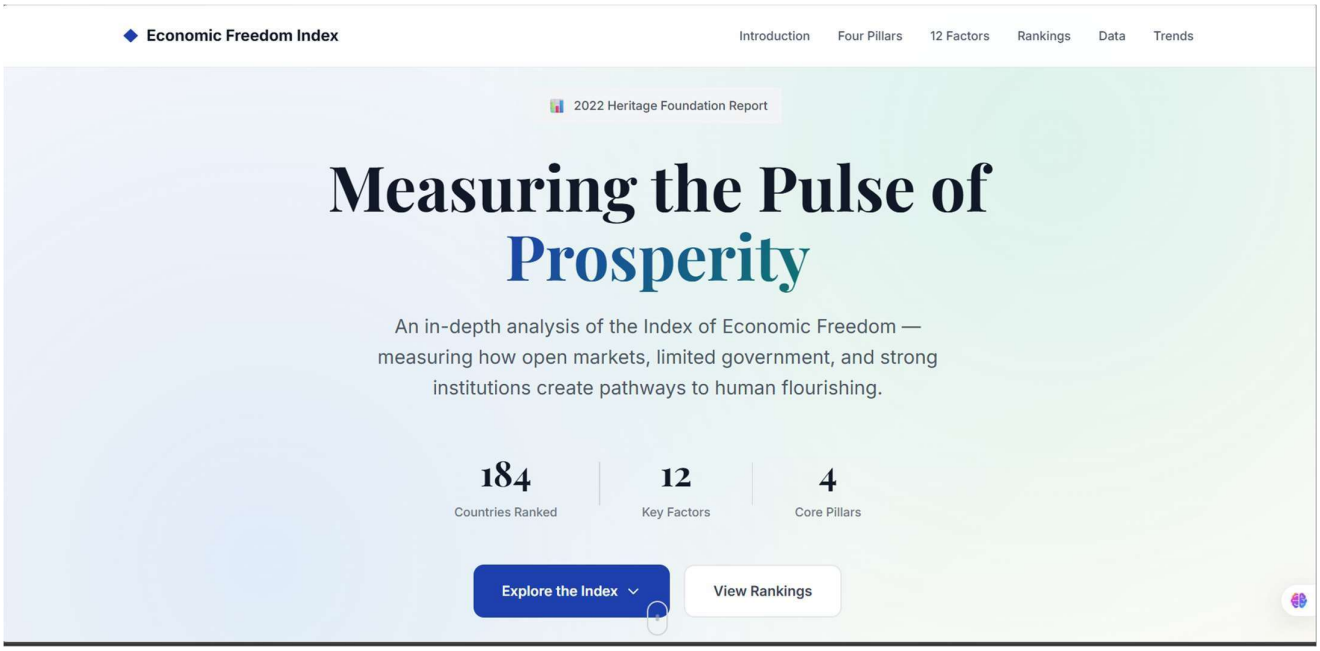
Brainstorm & Idea Prioritization:

During the brainstorming phase, different ideas were discussed to improve the analysis of economic freedom data. The main idea was to create an interactive dashboard to visualize the data clearly. Another idea was to add a country comparison feature so users can compare economic freedom scores between countries. The project also includes charts and maps to show trends and geographic distribution of the data. These ideas were prioritized and implemented using Tableau for effective data visualization.

Step-1: Team Gathering, Collaboration and Selection of the Problem Statement

In the first step, the project team gathered to discuss and understand the objectives of the project. Team members collaborated by sharing ideas and discussing various problems related to analyzing economic data. After evaluating different possibilities, the team selected the problem statement focusing on the difficulty of understanding large economic datasets and comparing economic freedom across countries. The team decided to address this issue by developing a data

visualization solution using Tableau to make economic freedom data easier to analyze and interpret.



Team Leader: Atcharthi Yamini Durga

Team member: Bathina Swaroopa

Team member: Bathula Shanthi Sri

Team member: Sshah Chandan

Step-2: Brainstorm, Idea Listing and Grouping

In this step, the team conducted a brainstorming session to generate different ideas related to solving the selected problem. All possible ideas such as creating dashboards, comparing countries, visualizing indicators, and identifying economic trends were listed. These ideas were then organized and grouped based on their similarity and usefulness for the project. After grouping, the most relevant ideas were selected for implementation using Tableau to effectively analyse and visualize economic freedom data.

Step-3: Idea Prioritization

In this step, all the ideas generated during brainstorming were carefully reviewed and evaluated by the team. Each idea was analysed based on its importance, feasibility, and relevance to solving the identified problem. The team discussed which ideas would provide the most value in understanding and visualizing economic freedom data effectively.

After the evaluation process, the most useful ideas such as creating an interactive dashboard, visualizing economic indicators, and enabling country comparison were given the highest priority. These ideas were selected because they help users easily interpret complex economic datasets and identify patterns and trends. The prioritized ideas were then implemented using Tableau to present economic freedom data in a clear and interactive manner.

3.2 Solution Requirement

Functional Requirements:

Following are the functional requirements of the proposed solution.

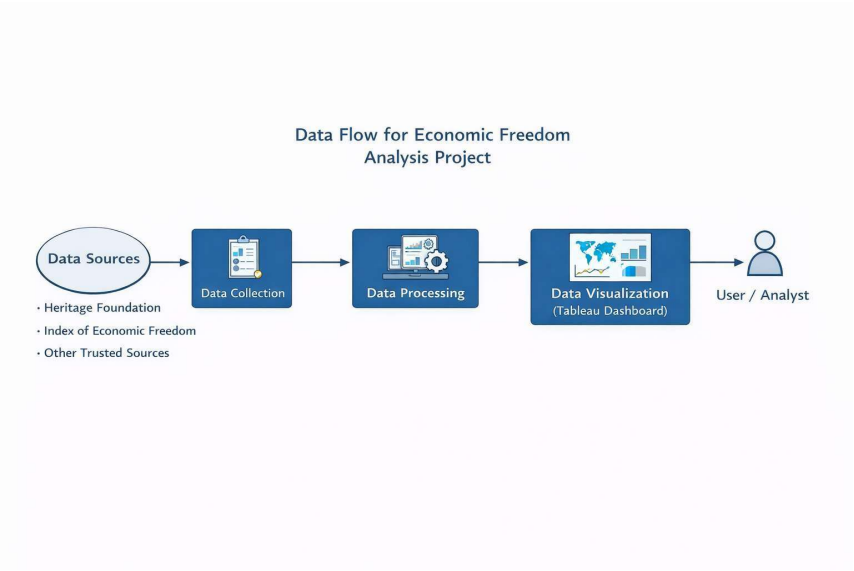
FR NO	Functional Requirement(Epic)	Sub Requirement(Story/Sub-Task)
FR-1	Data Collection	The system should collect economic freedom data for different countries from reliable sources.
FR-2	Data Visualization	The system should display economic indicators using charts, graphs, and dashboards.
FR-3	Country Comparison	The system should allow users to compare economic freedom scores between multiple countries.
FR-4	Trend Analysis	The system should show trends and patterns of economic freedom over time.
FR-5	Interactive Dashboard	The system should provide an interactive dashboard for easy data exploration using Tableau

Non-Functional Requirements:

.

FR NO	Non-Functional requirement	Description
NFR-1	Performance	The system should load dashboards and visualizations quickly without delays.
NFR-2	Usability	The interface should be simple and easy for users to understand and navigate.
NFR-3	Reliability	The system should provide accurate and consistent economic data analysis.
NFR-4	Scalability	The system should be able to handle increasing amounts of economic data from different countries.
NFR-5	Security	The system should ensure that data is stored and accessed securely.
NFR-6	Compatibility	The system should work properly with data visualization tools such as Tableau.

3.3 Data Flow Diagram



Data Flow Diagram – Description / Steps

1. Data Sources:
   Economic freedom data is collected from reliable sources such as the Index of Economic Freedom published by The Heritage Foundation and other trusted economic datasets.
2. Data Collection:
   The required data such as economic indicators, country names, and scores are gathered and imported into the system for analysis.
3. Data Processing:
   The collected data is cleaned, organized, and transformed into a suitable format for analysis by removing errors and arranging it properly.
4. Data Visualization:
   The processed data is visualized using charts, graphs, maps, and dashboards through Tableau.
5. User / Analyst:
   Finally, users interact with the dashboard to analyze economic freedom levels, compare countries, and understand trends in the data.

3.4 Technology Stack

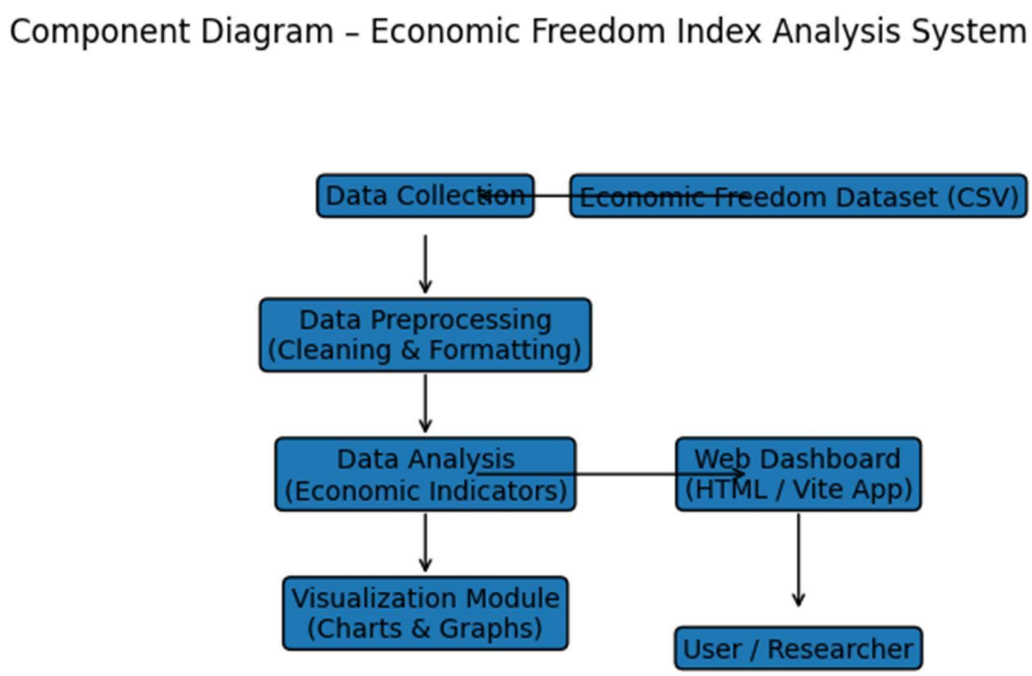


Table-1 : Components & Technologies:

SNO	Component	Technology	Purpose

1	Data Source	Index of Economic Freedom – The Heritage Foundation	Provides economic freedom data for different countries.
2	Data Preparation	Microsoft Excel	Used to clean, organize, and prepare the dataset for analysis.
3	Data Visualization	Tableau	Used to create interactive dashboards, charts, and maps.
4	Data Analysis	Tableau Analytics	Helps analyze trends and compare economic freedom indicators.
5	Operating System	Microsoft Windows	Platform used to run the tools and perform the analysis.

Table-2: Application Characteristics:

SNO	Characteristic	Description
1	Application Type	Data analytics and visualization application for analyzing economic freedom indicators.
2	Users	Students, researchers, economists, and policy analysts who study economic data
3	Data Type	Economic indicators such as taxation, trade freedom, government spending, and investment freedom.
4	User Interface	Interactive dashboards and charts for easy understanding of economic data.
5	Platform	Desktop environment using tools like Tableau.
6	Purpose	To analyse compare, and visualize economic freedom levels across different countries.

4. PROJECT

DESIGN 4.1 Problem–

Solution Fit Purpose:

- To simplify the analysis of complex economic freedom data.
- To help users easily understand and compare economic indicators across countries.
- To convert large datasets into clear visual insights for better interpretation.

How it fits:

- Provides an interactive platform to analyze economic freedom indicators.
- Uses dashboards and charts to simplify complex economic datasets.
- Allows users to compare economic freedom levels between countries.
- Helps identify trends and patterns in global economic data.
- Supports research and analysis using visualization tools like Tableau.

4.2 Proposed Solution Proposed Solution :

SNo	Component	Description
1	Data Collection	Gather economic freedom data from reliable sources such as the Index of Economic Freedom by The Heritage Foundation.
2	Data Preparation	Clean and organize the dataset to ensure accurate analysis.
3	Data Analysis	Analyze key economic indicators such as taxation, trade freedom, and government spending.
4	Data Visualization	Create interactive charts, graphs, and dashboards to represent the data clearly
5	User Interaction	Allow users to explore, compare, and analyze economic freedom indicators easily.

4.3 Solution Architecture

The solution architecture for the Economic Freedom Analysis project consists of several stages that work together to transform raw economic data into meaningful insights. First, economic freedom data is collected from reliable sources such as the Index of Economic Freedom. The collected data is then

cleaned and organized to ensure accuracy and consistency. After preprocessing, the dataset is analyzed to identify relationships between different economic indicators. The processed data is then visualized through interactive dashboards, charts, and maps created using Tableau. Finally, users interact with these dashboards to explore economic trends, compare countries, and gain insights into global economic freedom.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint -1	Data Collection	USN-1	As a team, we collect the Index of Economic Freedom dataset from reliable sources such as global economic reports.	2	High	Atcharthi Yamini Durga, Bathina Swaroopa
Sprint -1	Data Preparation	USN-2	As a team, we load and organize the collected economic freedom dataset for analysis.	1	High	Sshah Chandan, Santhisribath

Sprint -2	Data Preprocessing	USN-3	As a team, we clean missing values and ensure consistency in the	3	High	Sshah Chandan, Santhisri bathula

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
			economic freedom dataset.			
Sprint -1	Data Preprocessing	USN-4	As a team, we handle economic indicators such as property rights, tax burden, and trade freedom for analysis.	2	Medium	Atcharthi Yamini Durga, Bathina Swaroopa
Sprint-2	Visualization & Insights	USN-5	As a team, we create interactive charts and dashboards to visualize economic freedom data.	5	High	Atcharthi Yamini Durga, Bathina Swaroopa

Sprint-2	Testing & Validation	USN-6	As a team, we test the dashboard and verify that the economic insights are accurate.	3	High	Sshah Chandan, Santhisri bathula
			As a team, we design HTML	3		Atcharthi Yamini Durga,

Sprint-2	Web Integration	USN-7	pages to integrate the economic freedom dashboards into a web interface.		Medium	Bathina Swaroopa
Sprint-2	Deployment	USN-8	As a team, we deploy the economic freedom dashboard application and make it accessible for users.	5	High	Sshah Chandan, Santhisri bathula

Total Story Points

Sprint-1: 8
Sprint-2: 16

Total Story Points: 24

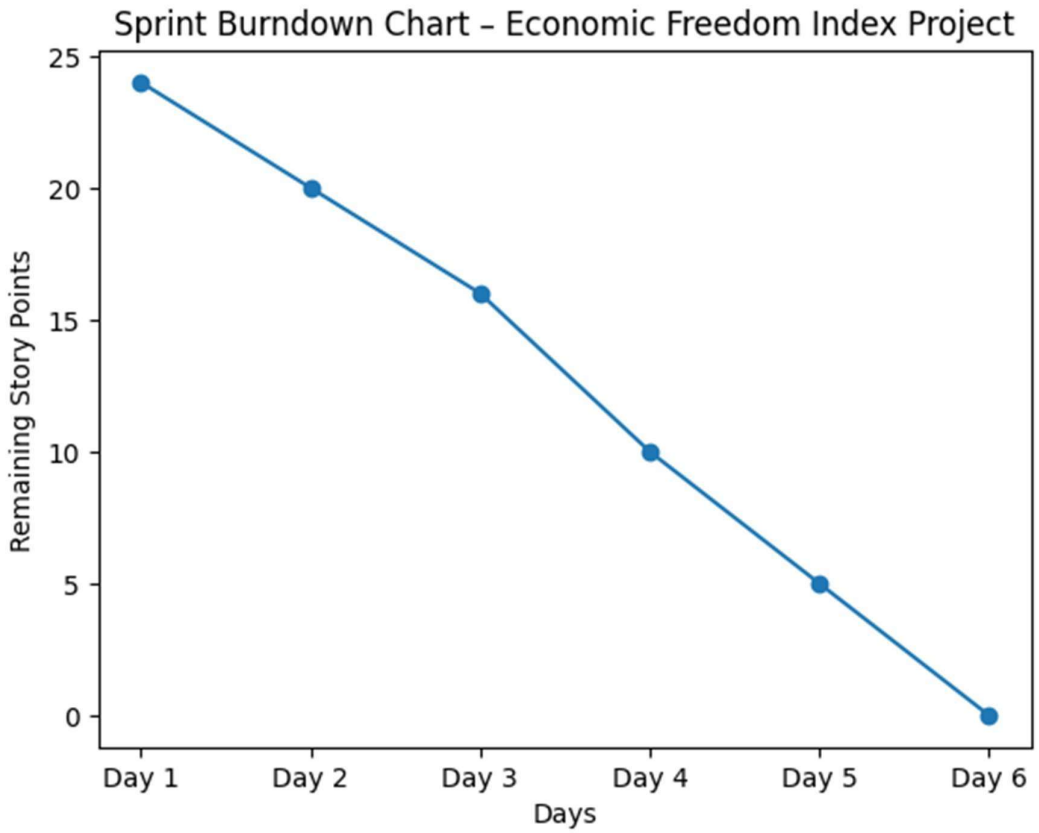
Project Tracker, Velocity & Burndown Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date(Planned)	Story Points Completed (as on planned end Date)	Sprint Release Date (Actual)
Sprint-1	8	5-Days	10 Feb 2026	15 Feb 2026	8	15 Feb 2026
Sprint-2	16	5-Days	16 Feb 2026	20 Feb 2026	16	27 Feb 2026

Velocity:
Total Story Points = 24
Number of Sprints = 2
Velocity = 24 / 2 = 12 Story Points per Sprint

Average Velocity per Day:
Sprint Duration = 5 Days
Velocity per Day = 8 / 5 = 1.6 Story Points per Day Burndown

Chart:



6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

1. Data Rendered:

The Economic Freedom Index dataset is successfully loaded and displayed in the web dashboard. The system renders country scores, regional comparisons, and economic indicators clearly through charts and tables without significant loading delays.

2.Data preprocessing:

Before visualization, the dataset is cleaned and organized by removing missing values, formatting attributes, and structuring the data for analysis. This preprocessing ensures accurate and consistent data representation in the dashboard.

3. utilization of filters

Interactive filters are used to allow users to explore data dynamically. Users can filter information based on region, country, or economic indicators, enabling easier comparison and deeper insights.

4.Calculated field:

Calculated fields are used to derive additional insights such as average regional scores and comparative indicator values. These calculations help present meaningful analytical results in the dashboard.

5.Dashboards:

The dashboard integrates multiple charts and visual elements including regional comparisons, pillar performance graphs, and trend analysis. It allows users to view economic freedom data in a clear and interactive format.

6. Story Telling:

he project presents economic data in a structured storytelling format where users can understand global economic freedom trends step by step. Visual insights help interpret relationships between economic indicators and national prosperity.

7. RESULTS

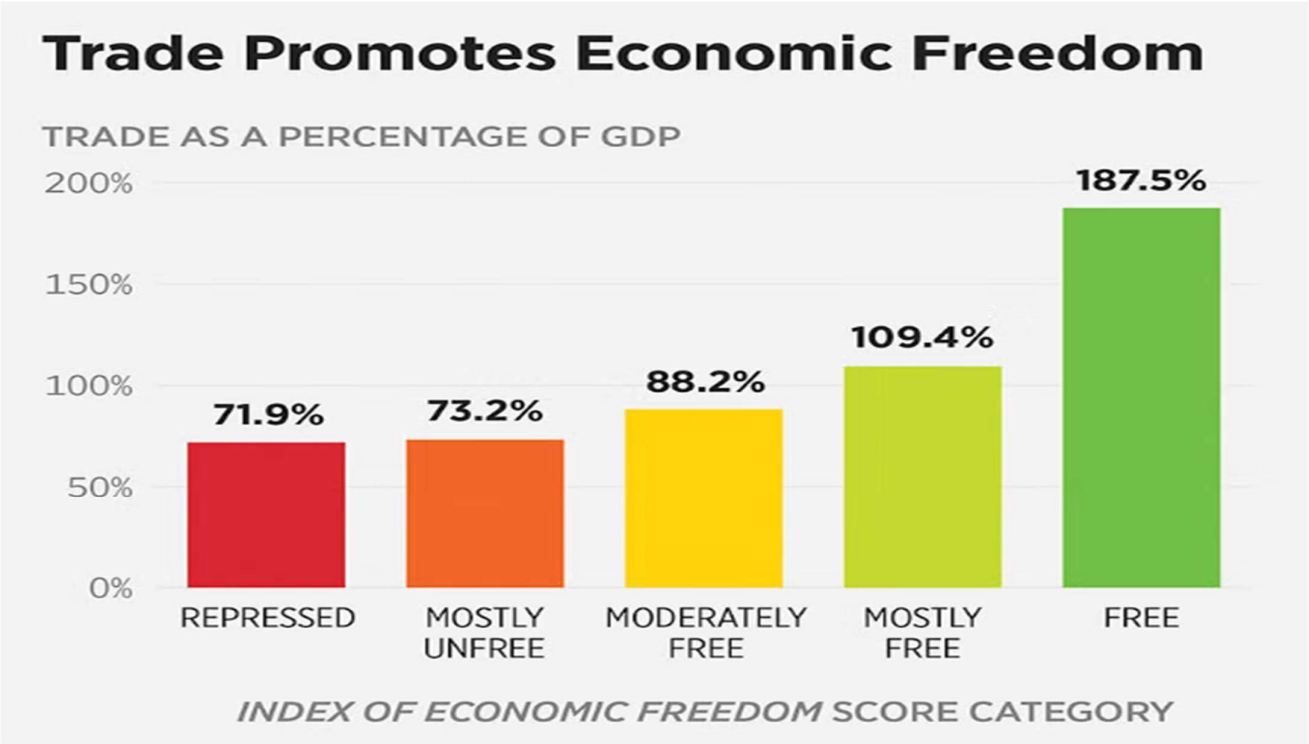
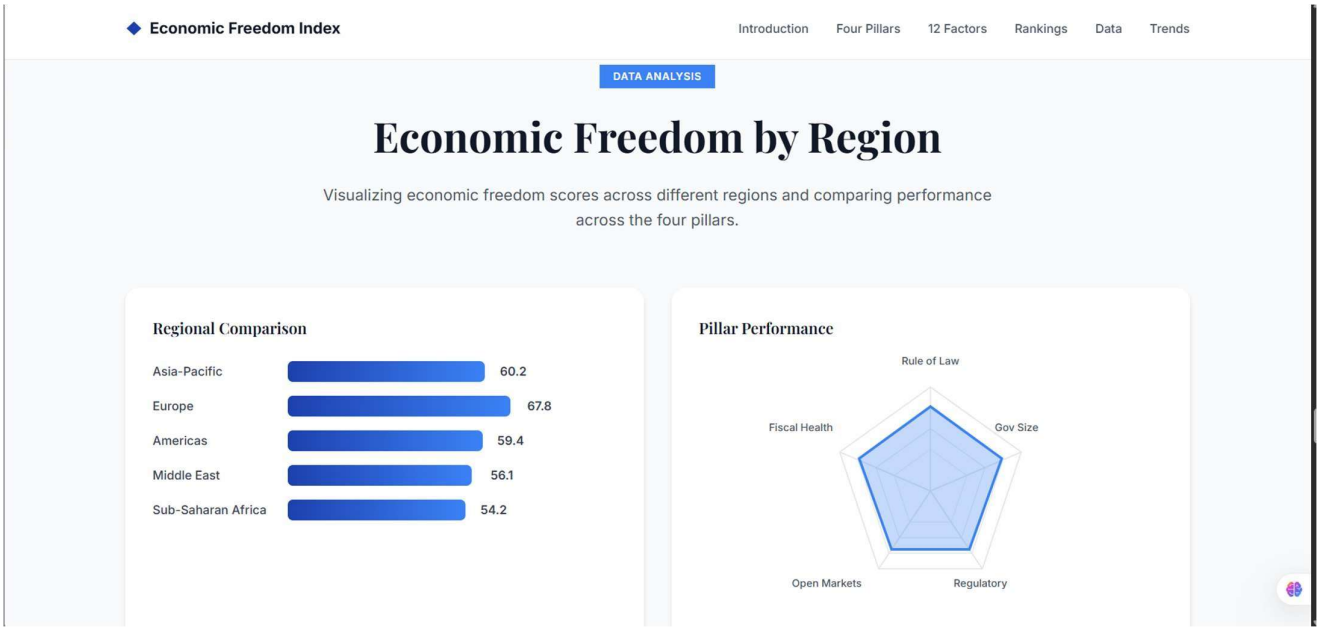
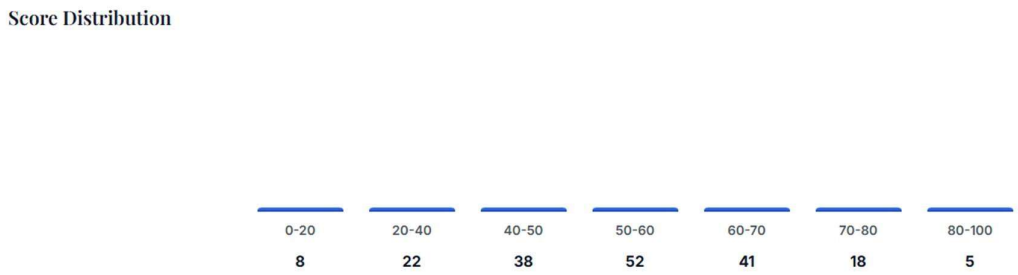
Activity 1.4 : Distribution of Economic Freedom Categories

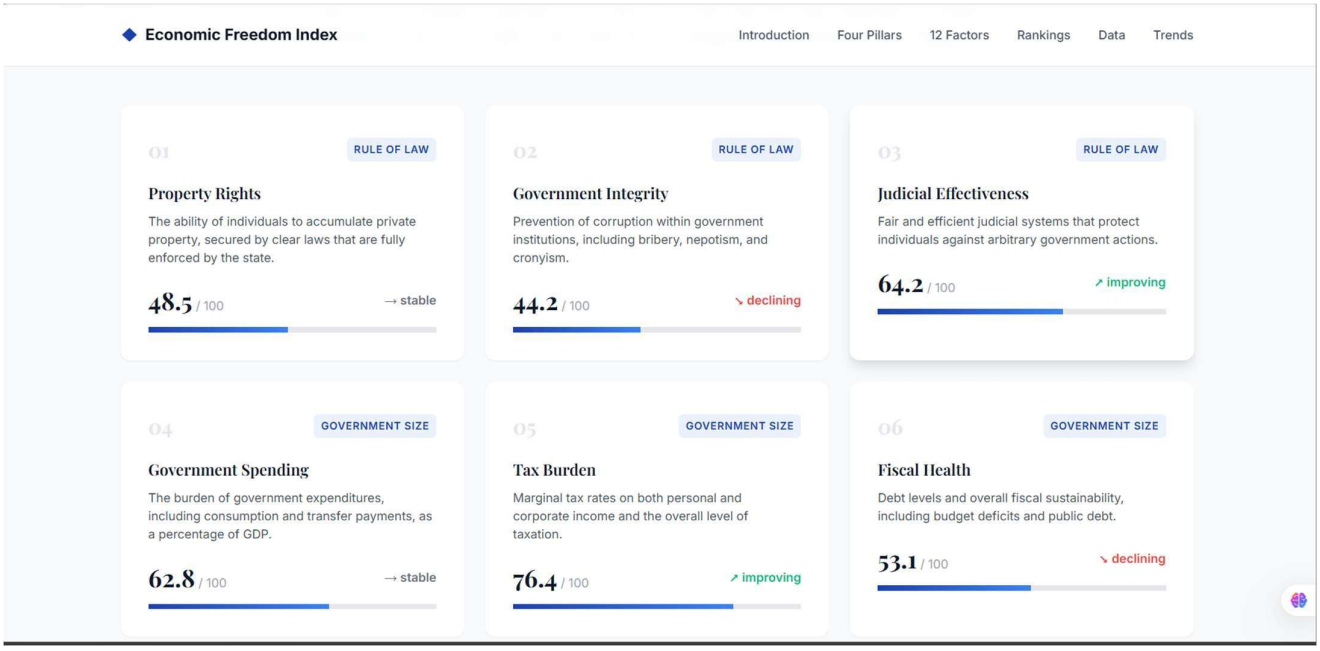


Activity 1.5: Regional Economic Freedom Comparison





Activity 1.6: Analysis of Economic Freedom Indicators



07 REGULATORY EFFICIENCY

Business Freedom

The ease of starting, operating, and closing a business, including regulatory procedures.

64.3 / 100 ↗ improving

08 REGULATORY EFFICIENCY

Labor Freedom

The flexibility of labor regulations, including hiring, firing, and wage determination.

56.8 / 100 → stable

09 REGULATORY EFFICIENCY

Monetary Freedom

Price stability and the absence of government price controls and micromanagement.

75.1 / 100 ↘ declining

10 OPEN MARKETS

Trade Freedom

The absence of tariffs and non-tariff barriers that affect imports and exports of goods and services.

74.6 / 100 → stable

11 OPEN MARKETS

Investment Freedom

The free flow of investment capital, both foreign and domestic, without restrictions.

52.8 / 100 ↗ improving

12 OPEN MARKETS

Financial Freedom

The efficiency of banking and financial institutions and independence from government control.

56.9 / 100 → stable

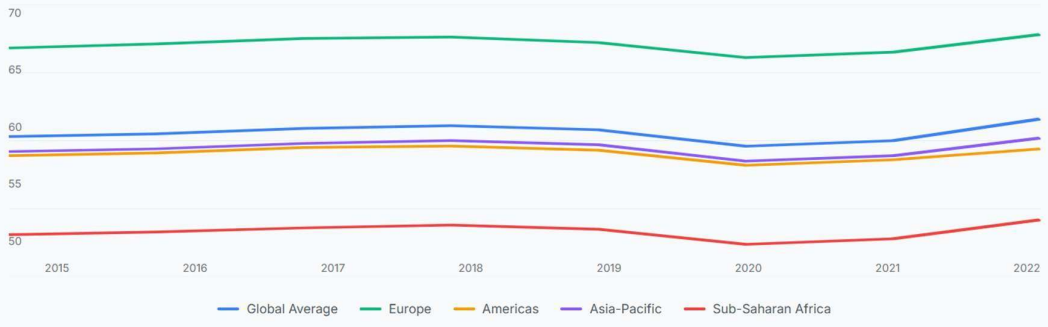
Activity 1.7 : Economic Freedom Trend Over Years

◆ Economic Freedom Index

Introduction Four Pillars 12 Factors Rankings Data Trends

Tracking the evolution of economic freedom across regions from 2015 to 2022, highlighting key trends and recovery patterns.

Regional Trends (2015-2022)



Activity 1.8 : Four Pillars Of Economic Freedom

Economic Freedom Index

Introduction | Four Pillars | 12 Factors | Rankings | Data | Trends

Average: 52.3

Rule of Law

Property Rights, Government Integrity, Judicial Effectiveness

The Rule of Law pillar measures the extent to which a country's legal system protects private property rights and the enforcement of contracts. It assesses the likelihood of property seizure, the independence of the judiciary, and the integrity of government officials.

Key Factors

Property Rights

The ability to accumulate private property secured by clear laws

Government Integrity

Prevention of corruption in government institutions

Judicial Effectiveness

Fair and efficient judicial systems for dispute

Average: 64.1

Government Size

Government Spending, Tax Burden, Fiscal Health

The Government Size pillar measures the burden imposed by government expenditures, taxation, and debt. Lower scores indicate higher government spending, heavier tax burdens, and deteriorating fiscal health.

Key Factors

Government Spending

Level of government expenditure as percentage of GDP

Tax Burden

Marginal tax rates and overall tax burden on citizens

Fiscal Health

Debt levels and overall fiscal sustainability

Average: 58.7

Regulatory Efficiency

Business Freedom, Labor Freedom, Monetary Freedom

The Regulatory Efficiency pillar measures the ability of individuals and businesses to manage their economic activities without undue government interference. It evaluates the ease of starting and operating businesses, labor market flexibility, and price stability.

Key Factors

Business Freedom

Ease of starting, operating, and closing a business

Labor Freedom

Flexibility in hiring, firing, and wage determination

Monetary Freedom

Price stability and freedom from price controls

Average: 61.4

Open Markets

Trade Freedom, Investment Freedom, Financial Freedom

The Open Markets pillar measures the extent to which individuals and businesses can freely trade and invest across borders. It evaluates tariff and non-tariff barriers, restrictions on foreign investment, and the efficiency of financial institutions.

Key Factors

Trade Freedom

Absence of tariffs and non-tariff trade barriers

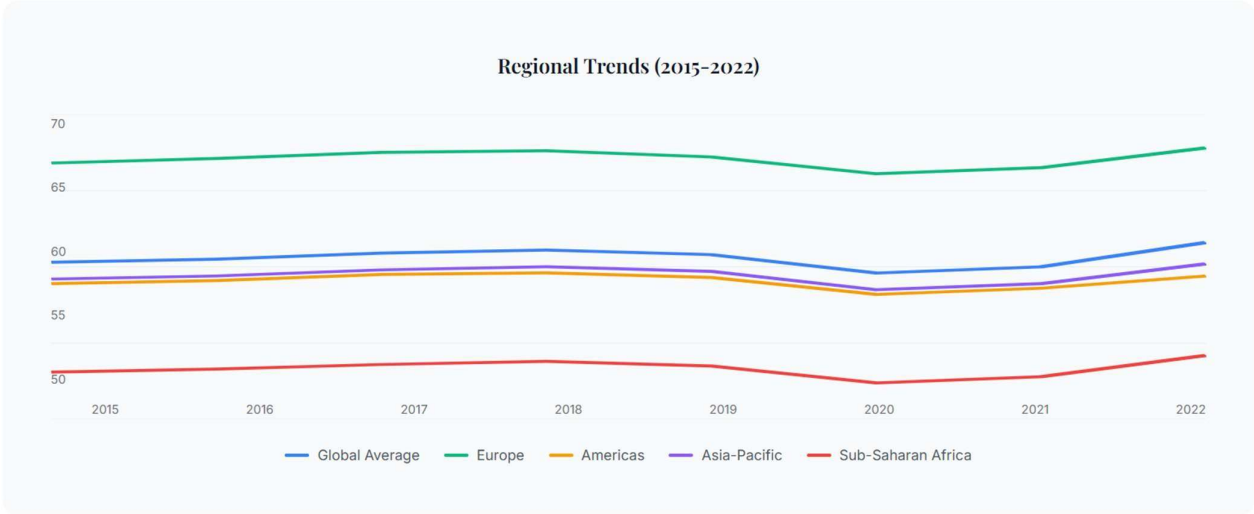
Investment Freedom

Freedom for both foreign and domestic investment

Financial Freedom

Efficiency of banking and financial systems

Activity 1.8: Interactive Economic Freedom Dashboard



Key Milestones

1995 — **Index Inception**
The Heritage Foundation and The Wall Street Journal publish the first Index of Economic Freedom.

2008 — **Financial Crisis Impact**
Global economic freedom declines as governments intervene heavily in markets worldwide.

2015 — **Digital Economy Rise**
Technological advancement drives improvements in business freedom across developed nations.

2020 — **Pandemic Response**
COVID-19 pandemic leads to unprecedented government intervention and temporary decline in economic freedom.

2022 — **Recovery & Growth**
Global economic freedom rebounds strongly with the highest average score since 2008.

---

8. ADVANTAGES & DISADVANTAGES

Advantages

1. Clear Visualization of Economic Data
   The dashboard presents complex economic freedom data using charts and graphs, making it easier to understand global economic conditions.

2. Easy Comparison Between Countries
   Users can quickly compare economic freedom scores across multiple countries and regions.

3. Improved Decision-Making
   The visual insights help researchers, policymakers, and analysts make informed economic decisions.

4. Interactive Data Analysis
   The dashboard allows users to explore different economic indicators such as property rights, tax burden, and trade freedom.

5. Supports Research and Policy Planning
   The analysis provides valuable insights that can support economic research and government policy planning

Disadvantages

1. Dependent on Dataset Accuracy
   The quality of insights depends on the reliability and accuracy of the economic freedom dataset used.

2. Requires Basic Technical Knowledge
   Users may need basic knowledge of data analysis tools or dashboards to fully understand the visualizations.

3. Static Dataset Limitations
   The project currently uses static datasets, which may not reflect real-time economic changes.

9. CONCLUSION

The project "Measuring the Pulse of Prosperity: An Index of Economic Freedom Analysis" successfully demonstrates how data analytics and visualization techniques can be applied to transform complex economic datasets into meaningful and accessible insights. Economic freedom plays a crucial role in shaping the prosperity, development, and overall economic performance of nations. By analysing the Index of Economic Freedom dataset, this project provides a structured approach to understanding how different economic policies and governance practices influence national economic growth and stability.

The project focuses on analysing several key economic indicators such as property rights, government integrity, tax burden, business freedom, labour freedom, monetary freedom, and trade freedom. These indicators collectively help measure the level of economic freedom in different countries. Through effective data preprocessing, analysis, and visualization, the project presents this information in the form of interactive dashboards, charts, and graphical representations that make complex economic data easier to interpret.

One of the major strengths of this project is the use of visual analytics, which allows users to quickly identify patterns, trends, and comparisons between countries and regions. The dashboard enables users to explore economic freedom scores, analyse regional economic performance, and evaluate the contribution of different economic factors. This helps in simplifying the analysis process and supports a better understanding of global economic conditions.

Furthermore, the project provides valuable insights that can assist students, researchers, economists, and policymakers in studying the relationship between economic freedom and national development. By presenting economic data in a clear and structured visual format, the project contributes to improving awareness of how economic policies affect prosperity and living standards across nations.

In conclusion, this project highlights the importance of data-driven decision making in economic analysis. The integration of data analytics, visualization tools, and interactive dashboards helps bridge the gap between raw economic data and meaningful interpretation. The developed system serves as an effective platform for exploring global economic freedom and can be further extended in the future to include real-time data updates, predictive analytics, and advanced economic modelling.

Overall, the project provides a useful analytical framework for understanding economic freedom and its impact on global economic development, making it a valuable tool for academic research, policy analysis, and economic studies.

The current project provides a strong foundation for analyzing economic freedom data through visualization and dashboard analytics. However, several improvements and extensions can be implemented in the future to enhance the functionality, scalability, and analytical capabilities of the system.

Integration with real-time Economic Data

In the future, the system can be integrated with real-time economic data sources such as global economic databases and financial APIs. This would allow the dashboard to automatically update economic freedom indicators and provide the most recent economic insights.

Use of Artificial Intelligence and Machine Learning

Advanced machine learning models can be applied to analyse historical economic freedom data and identify patterns or relationships between economic policies and national prosperity. AI-based models can also help predict future economic trends.

Development of Advanced Web-Based Analytics Platforms

The dashboard can be further developed into a fully functional web-based analytics platform where users can interactively explore datasets, perform advanced comparisons, and generate customized economic reports.

Mobile-Friendly Dashboard Accessibility

Future improvements can include designing responsive dashboards that can be easily accessed through mobile devices and tablets. This will make the system more accessible for users who want to analyse economic data on different devices.

Advanced Economic Forecasting Tools

Future versions of the system can include forecasting tools that use statistical models and predictive analytics to estimate future economic freedom scores and potential economic growth trends.

Expansion of Dataset and Indicators

Additional economic indicators such as inflation rates, GDP growth, employment rates, and investment flows can be incorporated to provide a more comprehensive analysis of global economic performance.
